

Sail la Vie

Open ideas and to-do list

Everything discussed but not developed yet. As of 29 September 2026, app version 29.09.2026.1910. Tick the box when an item is done.

New features

Ideas we discussed but haven't built yet.

- ☐ **1 Look-ahead weather warning PARKED**
While recording a sail, a phone notification if the forecast wind, gusts or pressure cross limits you set. Agreed it's better than showing live "wind now" readings on the recording screen.
- ☐ **2 Automatic weather for manually logged sails DEFERRED**
Fill in the weather for older sails from their date and place, the same way recorded sails get it now.
- ☐ **3 Merge crew and friends**
One record per person. When you add a friend, the app suggests merging them with the matching crew card.
- ☐ **4 Comments on Profile posts, plus other multi-user features YOUR REMINDER**
Friends commenting on your sails and plans. Add all the deferred interactive features when the interactive side is built.
- ☐ **5 Montage builder**
Turn a sail's photos plus the splash video into a short social-media video, with templates for clip order, durations, transitions and text.
- ☐ **6 Real maps in the PDF export NEEDS A DECISION**
The PDF map is still a line drawing with no real chart underneath. Decide whether to add proper map tiles.
- ☐ **7 More Profile post filters**
Currently All / Plans / Sails; more to be added later.
- ☐ **8 Videos and more than 20 photos per sail**
A possible paid premium option.

Long-term plans

The bigger direction for Sail la Vie.

- ☐ **9 Free and premium tiers**
Possibly with advertising.
- ☐ **10 Communities**
Users sharing sails and stories, plus public noticeboards beyond your own plans.
- ☐ **11 Google Play and the Apple App Store**
Publish the app in both stores.

☐ **12 A native iPhone app** YOUR REMINDER

When we build it, the email-verification deep link must be set up for iOS too.

Before a wider release

Clean-up and settings to change before opening up to more users.

☐ **13 Remove Transistorsoft (the paid tracking plugin)**

SailTracker's first real test went very well. Removing it also gets rid of the black box on start-up. Confirm everything works without it first.

☐ **14 Lower the speed limit back to about 60 knots**

MAX_PLAUSIBLE_SPEED_KT is currently 100, raised for car testing. Lower it once testing moves to the boat.

☐ **15 Stop listing every sailor**

Turn off the "Sailors on Sail la Vie" list on the Friends screen and Profile (SHOW_ALL_SAILORS_FOR_TESTING = false), and change the sign-in message that says everyone can see your username.

☐ **16 Find friends by email**

After testing, friends are added only by searching a username or an email address. Searching by email needs building.

☐ **17 Turn Supabase "Confirm email" back on**

Turned off for testing. The Android deep link for it is already built.

☐ **18 Move Supabase from Tokyo to Europe** YOUR REMINDER

For example Frankfurt.

☐ **19 Review storage and costs**

Supabase free-tier limits and photo storage costs.

☐ **20 Switch on PDF export and the certificate for testers** NEEDS A DECISION

Both were rebuilt on 26 September but are marked "coming soon" for testers. Decide when to switch them on.

Fixes and polish

Smaller jobs, and items to confirm.

☐ **21 Tablet splash screen**

The tablet shows the default Capacitor splash instead of Sail la Vie's. Needs a fix in the native Android files.

☐ **22 Tablet layout** CHECK IF DONE

The app should fit tablets automatically. Not sure this was finished.

☐ **23 Edit Profile sheet in the Nautical style** CHECK IF DONE

Was next on the list after 23 September. Not sure it was built.

☐ **24 Test Friends with two real accounts** CHECK IF DONE

May already be done now that testers are using the app.
